

elco

PROTRON

MONOBLOCK BURNERS

17 - 546 kW

PROTRON

Designed for light industry applications: ovens, dryers, spray booths, incinerators, hot air generators

Reliable heating solutions for every requirement

Wherever small or medium-scale heating solution is needed, ELCO is the best partner you can rely on. A comprehensive offer of tailor-made solutions is proposed by ELCO and offered by its worldwide network of distributors.

A partner in professional heating offering a wide range of burner operations to fit individual and commercial needs with optimum combustion technology respectful of sustainable environment.

A complete range dedicated to light industry

With its new gas and light oil burners series, ELCO offers a wide range of all-duty burners for light industry applications, developed in more than 80 years of research.

All PROTRON models are characterized by economical consumption, ease of installation, adjustment and maintenance, high temperature resistance and a wide possibility of customization in order to meet any type of installation request: each burner can be customized with head length, gas train and 8 combinations of software programming.

PROTRON burners are also equipped with an integrated display featuring a communication system based on symbols and numerical data, ensuring an easy and intuitive interaction between the user and the burner.

ELCO offers its new models with a wide range of choice. PROTRON range is available in two distinct machine architectures –gun and cubic– taking advantage of the benefits of each in order to better fit to the customer needs.

Gun

Ranging from the output of 17 to 546 kW PROTRON models with gun structure are suitable to work in gas and in light oil, available in one and two stages operation, and Low NOx emissions class 3 (<80 mg/kWh) when working in gas and class 2 (<185 mg/kWh) in light oil, according to EN676 and EN267 standards.

Cubic

The cubic program, ranging from the output of 30 to 210 kW, is available in one and two stages operation and Low NOx emissions class 2 (<120 mg/kWh) and class 3 (<80 mg/kWh) in gas operation and class 2 (<185 mg/kWh) in light oil, according to EN676 and EN267 standards.

Competent advice

Your contacts at ELCO and its partners are recognized experts with years of experience. Our worldwide support starts from concept creation to planning, design and project management up to commissioning and on-going operation of the plant throughout its life cycle.

MAIN CHARACTERISTICS OF THE RANGE

Communication

An intuitive and interactive system

The new MDE2 System and the Elcogram, equipped on PROTRON range constantly give real-time information to professional operators.

- **During the commissioning**

The setting of all necessary parameters for the burner operation is carried out by a user-friendly method thanks to the 5 buttons and the big size display.

- **During the burner operation**

The instantaneous data of each ignition follow one another in real time, allowing a quick check of the burner running (voltage value, flame signal, time for ignition...).

- **At each operation cycle**

The system records every event that happened during the last heating season and displays the stored data in the form of statistics.

1 stage burners

Elcogram, a universal language

As ELCO products are distributed worldwide, the company has developed a universal language composed of pictograms and numerical data. The pictograms use the majority of the symbols used on the wiring diagrams which are recognised and understood by all Nations. This ensures that information is easier to read than ever before.

2 stages burners

Maintenance

Rapid and easy maintenance solutions

In order to grant cost benefits and high performance on all ELCO burners, we implemented features that simplify commissioning and allow quick and efficient burner maintenance.

- **Quick: reduces downtime and cost of maintenance**

- **Efficient: grants optimal performance like after first commissioning**

For an easier maintenance, the combustion parts can be quickly removed, easily cleaned and, even when they are disassembled, they easily get back to their position after all the servicing work.

The RTC System developed by ELCO guarantees a simple commissioning and exceptional operation in any condition.

Reliability

High performance in any scenarios

A necessary feature for process industry applications is the reliability, and the PROTRON range ensures it in all conditions, even when operating at high temperatures.

All PROTRON models have been designed with metal parts where high temperature can be reached, assuring the continuity of the operation even in the most extreme situations.

The integral protection cover provides compactness and reduced space requirements, and protects the burner components in every working conditions.

Burner structure

High flexibility in any installation

- **Flexible configuration:**
quick start, tightness control, adjustable pre-purge and post-purge, permanent ventilation
- **Flexible range:**
short or long head, sliding flange, class 2 or class 3, one stage or two stages
- **Designed for applications:**
heat resistant, compact layout, easy maintenance, integral protection cover, graphic display

Burner with **gun structure:**
high performance ventilation
and maximum compactness.

Burner with **cubic structure:**
fully enclosed burner with optimal
accessibility and flexibility.

PROTRON OPERATIONS AND SYSTEMS

RTC System

Innovative solutions for quick and easy maintenance

The functional design of the housing, coupled with the innovative technology of the combustion heads, creates the RTC® (Retained Head Adjustment), offering several advantages:

- full access to all components, by simply removing the cover;
- simple and rapid maintenance;
- complete removal of the combustion head and access to its internal components with a single operation, without removing the burner from the boiler or disconnecting the gas train;
- prolonged retention of the optimum combustion head settings, which are not changed during service operations;
- rapid cleaning of the mechanical components, thanks to their clear layout;
- reduced servicing times through the use of standard nuts, bolts, screws and pipe fittings, which can be adjusted using only a few tools.

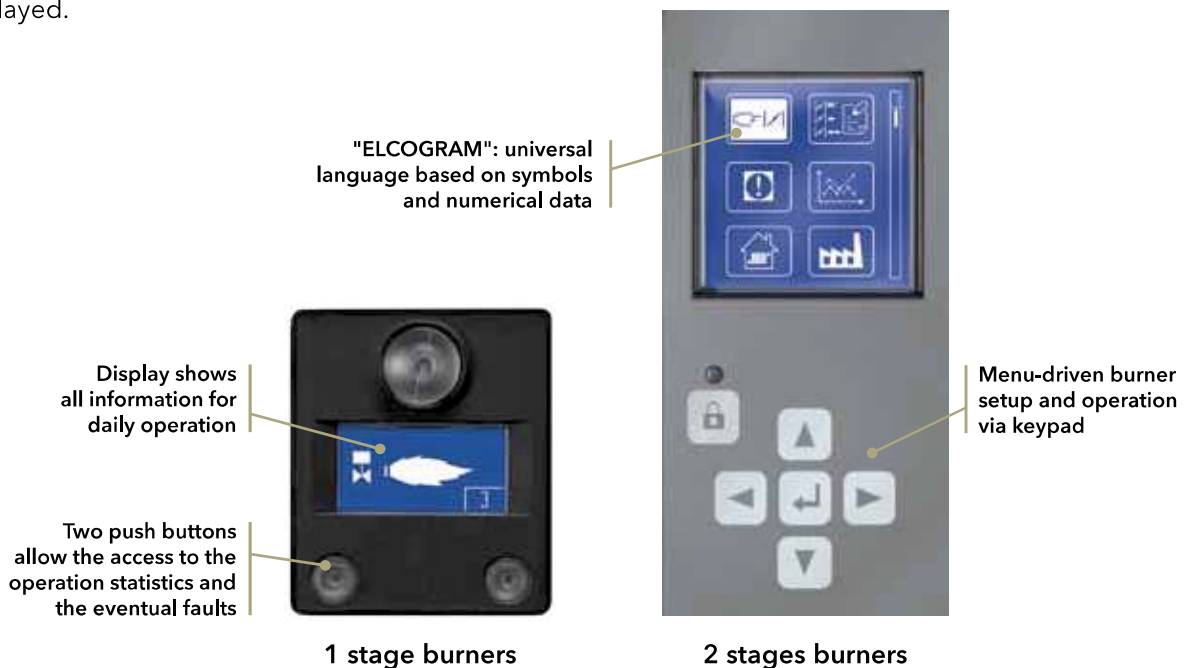

MDE2 System

Permanent communication of information easy to use

With its new MDE2® System and the integrated display, PROTRON burners provide constant information updates for professionals and users.

Instantaneous data (starting cycle, voltage measurement values and flame signal, etc.) and stored data (operating statistics) are now displayed.

Quick Start System

High performance in process application

Quick Start® is dedicated to industrial applications that requires temperature stability for process and production without any interruption.

For the first start-up, there is a long preventilation period, adjustable from 40 to 300 seconds.

After a controlled shutdown, the flame is turned off when temperature is reached, then the flame is restored in a few seconds when the temperature drops.

For gas burners, a tightness control is required each time the burner stops. This means:

- an increase in productivity that results from a minimum temperature variation;
- a primary and secondary energy savings;
- no thermal shock suffered by materials used to huge temperature variations;
- a really good security thanks to permanent control device.

Software programming

Wide possibilities of application

PROTRON burners are characterized by high versatility allowing this range to be used in several installations within the process industry. The range has been accurately developed to ensure a level of flexibility as never before, giving to the end user the possibility to meet any installation request: each burner is configurated in factory by our technicians according to the customer needs through a serie of parameters and options, such as:

- quick start;
- tightness control;
- adjustable pre-purge and post-purge;
- permanent ventilation.

With the aim to give to the customer the maximum flexibility ELCO provides 8 combinations of software programming:

Tightness control	Function
no	Standard
yes	Standard
yes	Post ventilation
yes	Quick start + permanent ventilation, pre-purge 30" at first heat demand
yes	Quick start + permanent ventilation, pre-purge 60" at first heat demand
yes	Quick start + long pre-purge 40" at first power supply
yes	Quick start + long pre-purge 300" at first power supply
yes	Quick start + long pre-purge 600" at first power supply
